Powering the Future

DATASHEET: CLY 352 5051E

Ins. Ratchet Cable Cutter w/Ins Hd

The new Clydesdale insulated ratchet cable cutter with hard-case insulated cover has been developed for maximum user safety such that only the cutting edges of the jaws are exposed in use. Ideal for cutting Aluminium cables up to 320mm² and Copper Cables up to 300mm².

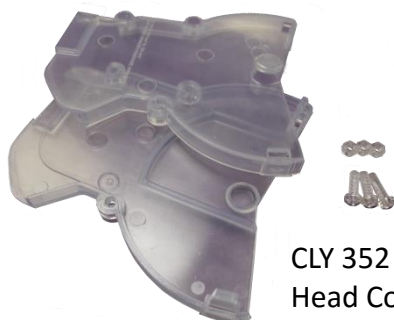

The ratchet mechanism is spring loaded to allow jaws to open fully when release catch is operated eliminating the need to prise the jaws open. The tool is tested to EN 60900 and rated up to 1000V.

The head cover can be easily removed if damaged or if the cutting tool needs servicing.

The cutter is designed to be used in conjunction with a composite grooved wedge if required, as shown below.

The hard-case insulated head cover is also available as a kit of parts as spares or to upgrade an existing, uninsulated 5051 cutter to this insulated design.

Cutting capacity (Cu)	Cutting capacity (Al)	Tool weight	Dimensions
300mm ²	320mm ²	1.3kg	40 x 160 x 40mm
