Powering the Future

DATASHEET: CLY 571 L40 LFH

Arc Flash Lift Front Hood

Introducing the next generation in arc flash head protection.

Clydesdale's revolutionary Lift Front Hood is a unique hybrid combination hood that is lighter and more comfortable to wear than a standard arc flash hood. The combination of a wider face shield and transparent chin guard more than doubles peripheral compared with wearing a standard hood and offers the user greater outward visibility and access to natural light. The Lift Front Hood uses 60% less fabric than a standard arc flash hood. This reduction in fabric allows for more natural head movement and eliminates the need for frequent hood adjustments due to shifts in the excess fabric. In addition to increased visibility and comfort, the Lift Front Hood offers an extra level of safety protection for the user as it allows for increased breathability.

Features

- Additional 45 degrees of vertical view over standard hoods.
- Vertical peripheral vision field increases by 109%.
- Natural ventilation system beneath the brim of the hard hat and in its mounting bracket.

Standards

- CE marked according to EU PPE directive
- Insulating to 1000v "double triangle rated"
- EN166 & EN170
- GS-ET-29, Class 2
- ASTM F2178
- ASTM F1506

Dimensions and weight

- Weight 1.04 kg
- Dimensions 50cm(h) x 26(w) x 28(d)
- Viewing Area 19cm x 50cm
