

CLY 370 TC*

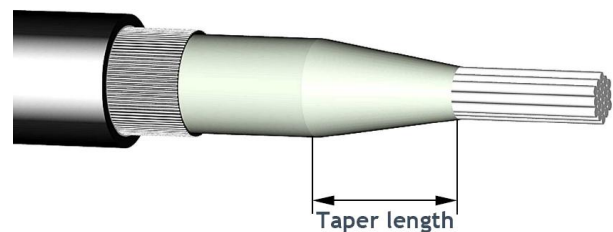

Insulation Tapering Tool

Data Sheet

The TC range of Alroc tools enable an exact length of insulation to be tapered on MV cables. Simple to use operating in a similar fashion to a pencil sharpener, the tools are non adjustable and are manufactured to suit individual cable specifications.

Simply provide us the cable spec and required length of the insulation taper. Common available lengths are 30, 40, 65, 95 and 120mm however other lengths are available on request.

Once insulation has been exposed, fit the TC tool on the end of the cable and rotate handles to create a clean taper on the insulation.
