

CLYDESDALE

Powering the Future

DATASHEET: CLY 1005

Cable Bending Tool

The Clydesdale Cable Bending Tool is designed to reduce the effort required for bending cables for jointing and similar tasks. Simply fit the head over the cable, put the roll pin back in place then bend the cable by exerting force on the handle as shown in the above picture. For stiff cables, the handle can extend telescopically to increase the torque on the cable. The user must be aware of the minimum bend radius of the cable before use.

Part No.	CLY 1005
Weight	5.5kg
