Powering the Future

DATASHEET: H25 Family

Durable Marking System

H25 Family

The Clydesdale H25 marking system is designed to provide an extremely durable marking system whose performance far exceeds anything else available.

H25 is our most popular size, ideal for pole labelling, based around a punched out character. When this character is slid into the black painted, anodised aluminium baseplate it gives the appearance of a black character on a coloured background.

Various sizes of baseplate and orientations are available.

A special Combi-Crimp tool provides the perfect accompaniment to the system as it cuts and seals the baseplate while also piercing a nail hole so that construction and erection of the sign is simplicity itself. The Combi-Crimp tool also works on all other sizes of characters except H160.

- Aluminium characters and baseplates.
- Characters are manufactured by punching out shapes, always legible even on very old, defaced or damaged markings.
- Characters employ a specialised paint with a UV varnish, providing enhanced colour and durability in service. Colour guaranteed against fading for 10 years.
- Legible from 10m under normal conditions.
- Signs can be created in the field for each installation as required.
- Banding / slotting features on baseplate allow signs to be installed by various means to aid installation.
- Baseplates suitable for vertical or horizontal installation.
- Baseplates are automatically cut to length and sealed when using Combi-Crimp.
- Available in pre-configured field assembly kits.
- Dimensions of the H25's rectangular shape: Width 20mm, Height 47mm.
- Dimensions of the H25 character: 25mm high.
