Underground Cable Winch

The 3200 model 2-tonne winch is a modern machine for running underground cables. The design features dual capstan wheel, which means you always have access to a full pulling force, 2000kp. Both the pulling force and speed are infinity variable. The wire drum has automatic rope layering system. Hydraulic systems with variable pump for complete control of the pulling force and speed. Chassis with suspended wheel axle, overrun brake and handbrake. Adjustable support legs and wheels. The most advanced version features an electronic unit with printer for complete control of pulling force, speed and length.

Basic Equipment

2-ton Winch
Steel wire 8 mm, 500m
Swivel
Cover
Instruction Book
