## Powering the Future

### User Instructions: CLY 920 1602 Pole Platform

Pole platform for one person or 150kg for use on wooden poles.  
The platform is attached to the pole by a strap.

Before use, check the condition of the ratchet strap and check for any cracks and deformations in the platform and the bolt connections.

The ratchet strap should immediately be replaced if it is not in good condition.

This platform should only be used on wood poles which are in suitable condition.

Pole diameter should be in the range 200-300mm

Assembly: The platform is lifted up to the desired height and the ratchet strap is tied around the pole. The hook must be inserted the correct way round (see picture) and check that the strap lies flat against the pole. Tighten the strap and make sure that it is tightened properly. See separate instruction for strap and tightener attached (document code UI ZZ 105 03)

When work is being carried out from the platform, the life line / fall arrest lanyard must always be tied to the pole or cross arm, not to the platform or it's support-rail.

Platform length: 900mm

Total length: 1000mm

Width: 350mm

Height: 500mm

Weight: 12kg
